Problem Statement

What makes good or bad questions?

Contribution

Goal: To understand the important factors of good and bad questions

Future Work

To be able to build a prediction model, beside common features, we want to create new features which will improve the model quality. We are interested in tag correctness as discussed in [2], one of the important factor which makes question bad is incorrect tagging. Also, meaningfulness of the content, we want to use NLP technique to extract a feature which reflect content’s meaningfulness.
